ZPE-IMC Zero-Point Encoding
Integrated Multimodal Multisensory Codec
ZER0PA

ZPE-FT

ZPE-FT ships a Python financial time-series codec and pattern-search package, an optional repo-local Rust helper, and the retained proof surfaces that bound what this repo can honestly claim. The package/build/install path is real, the controlled Wave-1 codec evidence is retained, and the open-access enterprise benchmark is still blocked. This repo is not public-release-ready.

WHAT THIS IS

Surface	Current role
`python/zpe_finance/`	Installable codec/search surface for OHLCV and tick workflows
`core/`	Optional repo-local Rust helper for nibble packing, hashing, and subsequence search
`scripts/`	Repo-local replay, acquisition, freeze, and refresh runners
`proofs/artifacts/2026-02-21_ft_wave1_final/`	Carried controlled authority bundle for promoted codec claims
`proofs/reruns/2026-03-19_alpaca_demo_smoke/`	Bounded delayed-feed market-refresh smoke on a two-series sample
`proofs/reruns/2026-03-21_phase06_contract_freeze_attempt_v3/`	Current blocker packet for the open-access enterprise benchmark
`docs/specs/ZPFIN_SPEC.md`	Packet-format reference for the FT codec surface

EVIDENCE AND CLAIMS

Canonical authority block:

Scope	Authority surface	What it establishes	What it does not establish
Current release / benchmark blocker	`proofs/reruns/2026-03-21_phase06_contract_freeze_attempt_v3/missing_inputs_packet.json`	The open-access enterprise benchmark is currently blocked because 33 named corpus exports plus the auditable query catalog and truth labels are still missing	A codec failure verdict or a closed Phase 06 gate

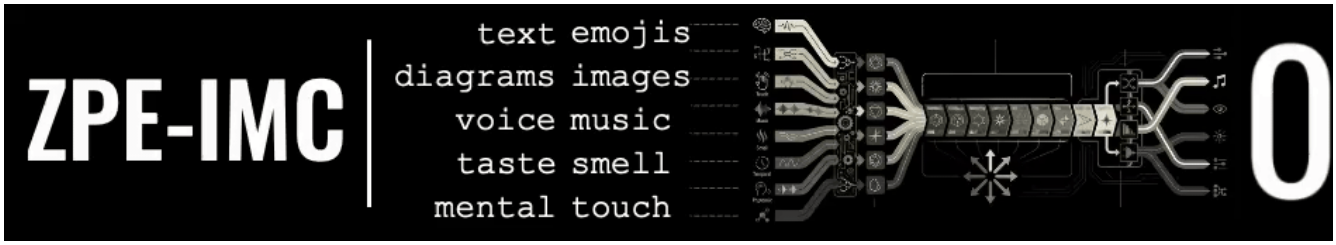
Scope	Authority surface	What it establishes	What it does not establish
Controlled codec claims	`proofs/CONSOLIDATED_PROOF_REPORT.md` and `proofs/artifacts/2026-02-21_ft_wave1_final/`	The carried Wave-1 bundle supports promoted local codec claims on the controlled corpus	Blind-clone reproducibility, public release readiness, or enterprise benchmark closure
Bounded market-refresh reality	`proofs/reruns/2026-03-19_alpaca_demo_smoke/real_market_corpus_manifest.json`	The repo-native delayed-feed acquisition, freeze, and refresh path is real on SPY and AAPL	Authority-bearing market `P@10`, broad market displacement, or enterprise readiness

Canonical repo coordinates:

- Repository URL: `https://github.com/Zer0pa/ZPE-FT`
- Contact: `architects@zer0pa.ai`
- License identity: Zer0pa Source-Available License v6.0
- Public-release posture: `NOT_PUBLIC_READY`

Choose your path:

- Audit the current truth: `docs/AUDITOR_PLAYBOOK.md`, `docs/PUBLIC_AUDIT_LIMITS.md`, and `proofs/FINAL_STATUS.md`
- Install or exercise the package: `pyproject.toml` and the setup section below
- Understand runtime and proof layout: `docs/ARCHITECTURE.md`
- Review release posture: `RELEASING.md`



SETUP AND VERIFICATION

```
python -m venv .venv
source .venv/bin/activate
python -m pip install -U pip
python -m pip install -e .
python - <<'PY'
import zpe_finance
from zpe_finance.rust_bridge import rust_version
print("exports", sorted(zpe_finance.__all__))
print("rust_bridge", rust_version())
PY
```

Surface	Truthful entrypoint	Boundary
Base package sanity	`python -m pip install -e .`	Package import, local codec use, and docs audit
Heavier repo-local proof work	`python -m pip install -e ".[test,proof]"`	Proof and rerun work inside this repo

Surface	Truthful entrypoint	Boundary
Optional native helper	`python -m pip install -e ".[native]"` then `cd core && maturin develop --release`	Only when you intentionally exercise the repo-local helper
Controlled Wave-1 replay	`python scripts/run_wave1.py --artifact-root artifacts/2026-02-20_zpe_ft_wave1 --native-helper auto`	Writes a fresh local rerun destination; it does not replace the carried authority bundle under `proofs/artifacts/2026-02-21_ft_wave1_final/`
Repo-local env gate	`python poc/scripts/00_env_check.py --workspace . --repo .`	Operator/local proof setup, not the front-door package path

VERIFICATION

Current evidence you can safely repeat:

- shipped build, install, and import truth is evidenced in `20260321T202948Z_build.log`, `20260321T202948Z_clean_install_verify.log` and `20260321T202948Z_pytest_alignment.log`
- controlled Wave-1 results remain `19.19x` OHLCV compression, `20.57x` tick compression, max RMSE `0.0`, mean `P@10 = 0.90`, and local query latency `p95 = 0.0567 ms`
- SQLite roundtrip is supported on the carried bundle
- direct comparator evidence exists in the carried bundle, but broader incumbent-displacement claims are not promoted from this repo pass
- the March 19 delayed-feed smoke is real but bounded
- Timescale-backed DB equivalence remains `INCONCLUSIVE`
- the open-access enterprise benchmark remains `BLOCKED_MISSING_INPUTS : 33` named corpus exports plus the auditable query catalog and truth labels are still missing

Read the proof posture here:

- `proofs/FINAL_STATUS.md`
- `proofs/CONSOLIDATED_PROOF_REPORT.md`
- `docs/PUBLIC_AUDIT_LIMITS.md`
- `proofs/artifacts/operations/20260321T202948Z_pytest_alignment.log`

WHERE TO GO

Routes:

- Fastest honest audit path: `docs/AUDITOR_PLAYBOOK.md`
- Canonical doc ownership: `docs/DOC_REGISTRY.md`
- Docs index: `docs/README.md`
- Runtime and proof map: `docs/ARCHITECTURE.md`
- Release gate: `RELEASING.md`
- Support routing: `docs/SUPPORT.md`
