ZPE Geo

license SAL v6.0 | python 3.11+ | release posture not release-ready | current operator state red claims remain | historical bundle archived only

WHAT THIS IS

ZPE Geo is the Git-backed private workstream repo for deterministic geospatial trajectory compression, fidelity checks, maneuver search, and H3 roundtrip validation.

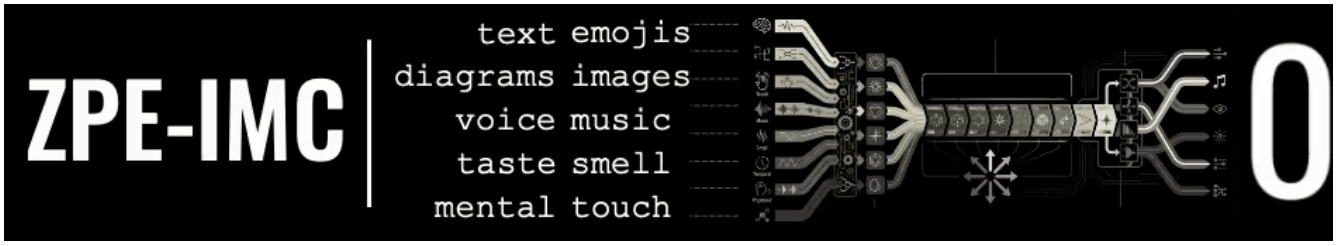
For collaborators with repo access, this is the working GitHub surface for package code, proof custody, and documentation. It is not a release-ready repo, and the local install path here is a sanity check, not release validation.

Start Here

1. Read proofs/FINAL_STATUS.md. This is the governing current-status document for this repo.
2. Read PUBLIC_AUDIT_LIMITS.md. This defines what the repo can and cannot currently prove.
3. Read AUDITOR_PLAYBOOK.md if you want the shortest honest review path.
4. Read code/README.md for the install-facing package surface.

Current Authority

Question	Current answer	Canonical source
What is the governing current-status document?	proofs/FINAL_STATUS.md	proofs/FINAL_STATUS.md
What supports that current-status document?	The copied-back March 21 operator pack under proofs/artifacts/2026-03-21_operator_status/	proofs/artifacts/2026-03-21_operator_status/README.md
What is the current blocker state?	The lane is still blocked on `GEO-C001`, `GEO-C002`, and `GEO-C004`	proofs/FINAL_STATUS.md
What is not being claimed?	No blind-clone closure, no full-corpus closure, no public release readiness, and no open-ended superiority claim	PUBLIC_AUDIT_LIMITS.md



QUICKSTART AND LICENSE

Use the package surface from code/README.md if you want the lowest-cost repo-local sanity path:

```
python -m venv .venv
source .venv/bin/activate
python -m pip install -e "./code[dev,h3]"
python -m pytest code/tests -q
python - <<'PY'
from zpe_geo import H3Bridge, ManeuverSearchIndex, decode_trajectory, encode_trajectory
print("zpe-geo import OK")
print("h3 backend:", H3Bridge().backend)
print("search surface:", ManeuverSearchIndex.__name__)
PY
```

That verifies the repo-local package surface only.

Historical Context Only

The archived bundle under proofs/artifacts/2026-02-20_zpe_geo_wave1/ remains part of the repo because it contains real historical evidence:

- archived performance metrics across all eight promoted claims
- archived comparator notes, including an in-repo AIS baseline comparison
- preserved contradictions that explain why archived success does not equal current release authorization

Read those facts as historical-only context through proofs/CONSOLIDATED_PROOF_REPORT.md, not as current release status.

WHERE TO GO

Need	Route
Current verdict and release posture	proofs/FINAL_STATUS.md
Detailed current evidence and historical bundle interpretation	proofs/CONSOLIDATED_PROOF_REPORT.md
Audit path	AUDITOR_PLAYBOOK.md
Audit limits and exclusions	PUBLIC_AUDIT_LIMITS.md
Architecture and evidence map	docs/ARCHITECTURE.md
Docs ownership map	docs/CANONICAL_DOC_REGISTRY.md
FAQ and support	docs/FAQ.md, docs/SUPPORT.md
Install surface	code/README.md
