ZPE-IMC Zero-Point Encoding Integrated Multimodal Multisensory Codec | ZER0PA

# ZPE-Robotics

pypi v0.1.0 python 3.11 | 3.12 license SAL v6.0

## WHAT THIS IS

ZPE-Robotics is the private repository for the `zpe-motion-kernel` package. The current release surface is a standalone Python package for frozen `wire-v1` motion transport, replay, search, and audit workflows. It is not a full robotics-platform release.

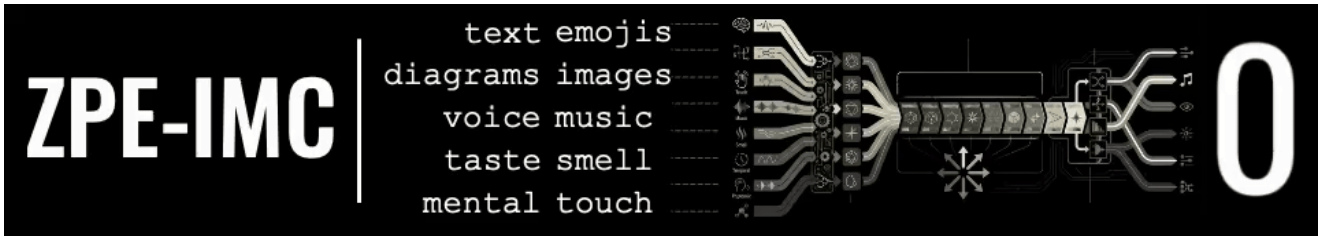
## QUICKSTART AND AUTHORITY POINT

| Surface | Current truth |
|---|---|
| Repository | `https://github.com/Zer0pa/ZPE-Robotics.git` |
| Package / import / CLI | `zpe-motion-kernel` / `zpe_robotics` / `zpe` |
| Acquisition surface | `pip install zpe-motion-kernel` |
| License | `LicenseRef-Zer0pa-SAL-6.0` |
| Contact | `architects@zer0pa.ai` |
| Release state | private staging only |
| Engineering | not complete |
| Current authority | `proofs/ENGINEERING_BLOCKERS.md` |

| Authority layer | File |
|---|---|
| governing blocker state | `proofs/ENGINEERING_BLOCKERS.md` |
| benchmark gate verdicts | `proofs/enterprise_benchmark/GATE_VERDICTS.json` |
| adversarial verdicts | `proofs/red_team/red_team_report.json` |
| package/runtime boundary | `proofs/runbooks/TECHNICAL_RELEASE_SURFACE.md` |
| IMC integration boundary | `proofs/imc_audit/imc_architecture_audit.json` |

# LANE STATUS SNAPSHOT

| Surface | Current truth |
|---|---|
| Benchmark gates | `B1` , `B2` , `B4` , and `B5` pass; `B3` fails |
| Real-data benchmark | `187.1345x` on `lerobot/columbia_cairlab_pusht_real` |
| Red-team | attacks `1` , `2` , and `6` withstand; `4` partially withstands; `3` and `5` fail; `7` remains open |
| Replay claim boundary | strict bit-exact replay is not proven on the current `.zpbot` round-trip |
| Searchability | supported without decode on the benchmark surface |
| Rust integration | no robotics `.zpbot` Rust ABI is wired into this repo |
| Release workflow | GitHub OIDC workflow is aligned; PyPI UI registration is still operator-only |
| Public release | not authorized |



# REPO SHAPE

| Area | Purpose |
|---|---|
| `src/zpe_robotics/` | package implementation, CLI, packet handling, search, anomaly, and audit logic |
| `tests/` | release-surface, CLI, codec, and regression checks |
| `scripts/` | replay, benchmark, falsification, and clean-clone helpers |
| `docs/` | front-door, architecture, support, legal, and family-linkage docs |
| `proofs/` | blockers, benchmark artifacts, red-team outputs, release runbooks, and historical bundles |
| `.github/workflows/` | CI, clean-clone, parity, comparator, and publish workflows |

# EVIDENCE AND CLAIMS

- Runtime and proof artifacts outrank prose.
- `GO` and `NO-GO` language is reserved for named gates only.
- Historical proof bundles remain lineage only. They do not override the March 21 blocker-state evidence.
- No IMC runtime import is introduced by this repo.
- The current installable package artifact is `zpe-motion-kernel 0.1.0` , but the repo's March 21 blocker-state docs remain the authority surface for engineering status.

Use these files together:

| Need | Read first |
|---|---|
| Current blocker truth | `proofs/ENGINEERING_BLOCKERS.md` |
| Benchmark verdicts | `proofs/enterprise_benchmark/GATE_VERDICTS.json` |
| Adversarial findings | `proofs/red_team/red_team_report.json` |
| Package/runtime boundary | `proofs/runbooks/TECHNICAL_RELEASE_SURFACE.md` |
| Release-candidate note | `docs/RELEASE_CANDIDATE.md` |
| Historical lineage | `proofs/artifacts/historical/README.md` |

# SETUP AND VERIFICATION

Public package install:

```
pip install zpe-motion-kernel
zpe --version
```

Repo-local engineering surface:

```
python -m venv .venv
source .venv/bin/activate
python -m pip install --upgrade pip setuptools wheel
python -m pip install -e ".[dev,benchmark,telemetry,netnew]"
python -m pytest tests -q
python -m build
```

If you need the shortest honest verification route, use `docs/AUDITOR_PLAYBOOK.md`. If you need the release workflow boundary, use `RELEASING.md`.

# CONTRIBUTING, SECURITY, SUPPORT

| Need | Route |
|---|---|
| Contributor workflow | `CONTRIBUTING.md` |
| Security reporting | `SECURITY.md` |
| Governance and claim policy | `GOVERNANCE.md` |
| Support routing | `docs/SUPPORT.md` |
| Docs index | `docs/README.md` |

| Need | Route |
| --- | --- |
| | |
